Rabeya Basu

Research Summary:

Recently (2000-2003), A. Bak and G. Tang studied the stabilization problems for hermitian and quadratic groups. It has been shown that one can generalize our results that normality is equivalent to the Local-Global Principle for the unitary rings. I am also trying to generalise related problems for for the quadratic modules with absolute stable range condition.

Invited Lectures/Seminars:

1. Visited Stat-Math unit, Indian Statistical Institute from March 19 to March 30, 2007.
